Commerce through
the power of an API

moltin.com

moltin

The flexible solution to cross platform selling

Connecting your store to anything powered by the internet, start or extend your commerce journey.

Agile
Ability to replace or keep your existing commerce platform - use moltin to enhance cross channel selling.

Freedom
Developers use any language or framework, designers have total creative control - build what's right for your business.

Fast
Create stores quickly with fast development times and improve customer experience with fast response/load times.
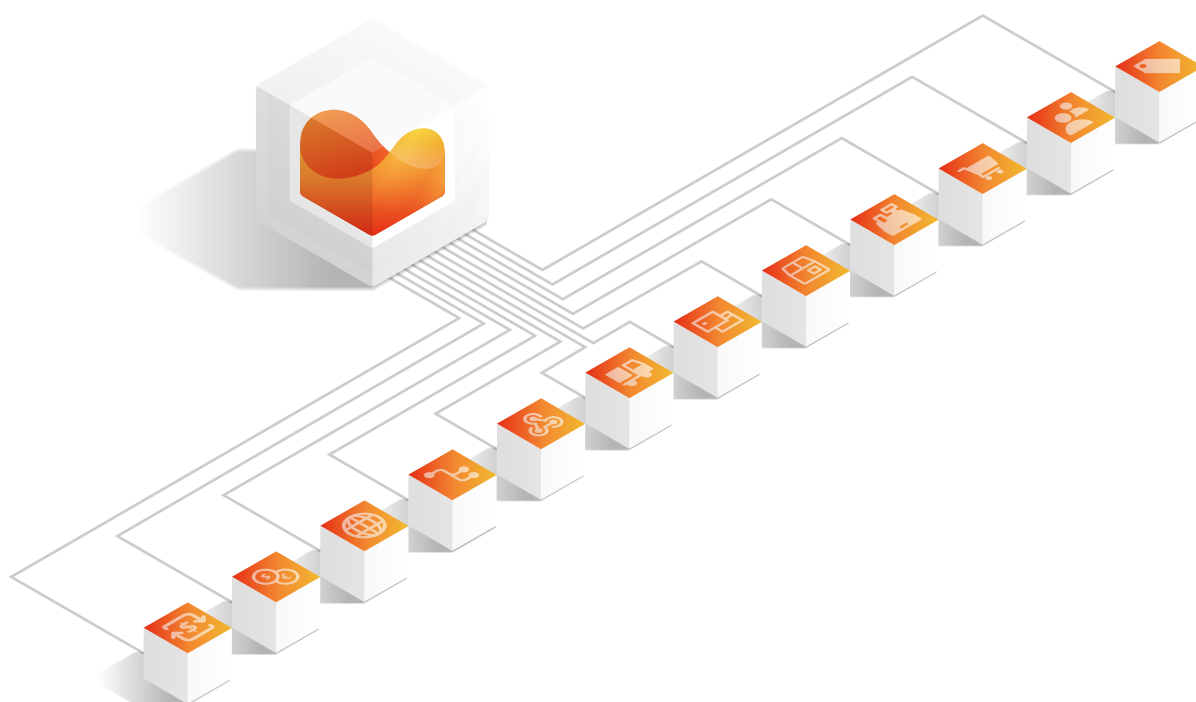

Scalable
From a small proof of concept to a huge flash sale, we scale with you to meet your business needs.

Lightweight
No need to download a full platform - microservices architecture means you only implement the features you need.

Integrated
More than just an API - also get the surrounding eco-system, management dashboards, example applications and third party enhancements.

Build commerce the way you want

Microservices allowing rapid and creative experiences at scale.

Inventory management
Create and organize simple products or advanced matrices. Deliver rich, localized product content with catalog control, media management and powerful search functionality.

Customers
Store and manage customer data. Assign customers to specific groups, manage their permissions, and add custom data fields to find out more about them.

Carts
Persistent, cloud-based, cross-platform carts. Add predefined products and dynamically generate charges on the fly. Completely secure, even on client-side.

Checkouts & Orders
Easily convert a cart to an order with our streamlined checkout flow. Sync orders with your inventory in real-time and bring orders from all sales channels into one central system.

Payments
Accept payments in over 200 countries with routing to over 100 gateways and easily switch payment gateways in minutes.

Shipping & Taxes
Get shipping calculations for multiple shipping methods to suit any product and tax calculations with control over tax zones. Automated support for the US and EU.

Webhooks
Implement webhooks to set up triggers for events within the moltin system. Use these to notify your existing software of changes, keeping everything up-to-date.

Flows
Control, integrate and deliver content in one place, across all channels. Use Flows to extend existing or create custom data schemas, and structure these to your exact needs.

Multi-lingual + Multi-currency
Serve your store data and reach customers in multiple languages. Expand to new regions and allow your customers to shop, view prices and pay in their local currency.
